DATE...............

9. Construct a bot to scrap data from a website.

1. Create a sequence.

2. After completion of WebRecording, click on data scrapping and a dialog box will appear, add the information according to the dialog box.

3. After clicking next, there is an option extracorelated data in which maximum no. of results by default is 100 so change it accordingly.

4. Then click on finish and drag writeCSV to the sequence to create an excel file for the data Scrapped.
